

MEDICAL HIGH UTILIZATION

A Complex Challenge That Can Be Prevented

50%

of total healthcare costs are from 5% of the total adult population, known as High Utilizers

9% GDP

cost of high utilizers medical care, which is almost \$1.45 trillion

High utilizers are often the most vulnerable and sickest Americans

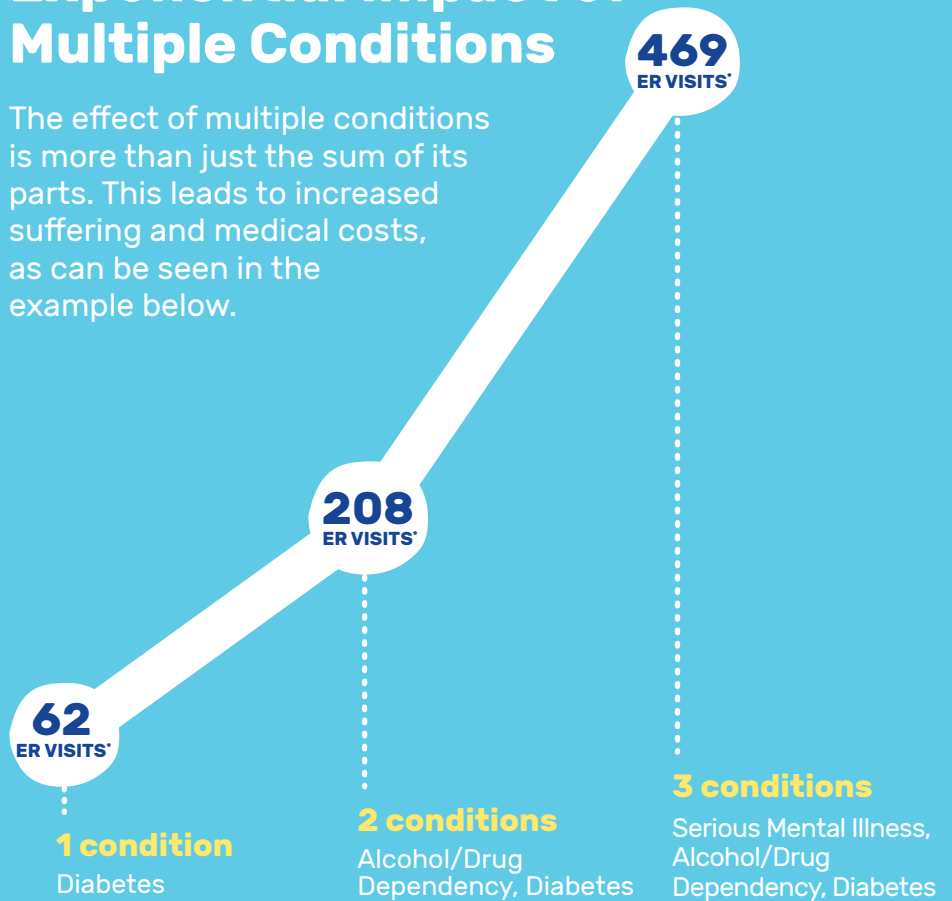

Tremendous impact on emergency departments, hospital admissions and healthcare providers

High utilizers often have multiple conditions

Exponential Impact of Multiple Conditions

The effect of multiple conditions is more than just the sum of its parts. This leads to increased suffering and medical costs, as can be seen in the example below.

*Per 1000 member months
Source: DHCS, Research and Analytic Studies Division

These conditions are tied to negative exposures & behaviors

- trauma
- poverty
- social isolation
- unemployment
- exposure to toxins
- sedentary behavior
- housing instability
- poor diet

MANY, IF NOT ALL, OF THESE ARE
PREVENTABLE
BY IMPROVING COMMUNITY CONDITIONS

HERE'S HOW >

Community conditions shape health

so community interventions are needed to disrupt the pathway to high utilization.

What's Sold & How It's Promoted

EXAMPLE:
Incentivize healthy food outlets

DISRUPTS:
Type-2 diabetes and heart disease

Housing

EXAMPLE:
Increase safe and affordable housing

DISRUPTS:
Asthma, housing instability, multiple physical/mental health concerns

Social Networks & Trust

EXAMPLE:
Foster peer support networks

DISRUPTS:
Social isolation, substance abuse, mental illness

Look, Feel & Safety

EXAMPLE:
Increase safe park space and lighting

DISRUPTS:
Type-2 diabetes, heart disease, and depression

Living Wages & Local Wealth

EXAMPLE:
Increase job and life skill training

DISRUPTS:
Unemployment, poverty, multiple physical/mental health concerns

Improving community conditions has an exponential positive impact

Complementing current interventions with community-wide prevention strategies reduces suffering and cost for high utilizers.

Reduce

the severity of existing health conditions of high utilizers

Prevent

individuals from becoming high utilizers in the first place, reducing the overall risk for preventable injury and illness among the broader population

Support

the maintenance of health of those at risk for becoming high utilizers

Current interventions typically focus on reacting to immediate needs already diagnosed. While necessary, these interventions do not prevent illness and injury in the first place.

TREATING THE SICK + COORDINATED CARE + SOCIAL SERVICES

A comprehensive approach also includes:

IMPROVING COMMUNITY CONDITIONS
